

SHANES LEG HOLDER with table/desk mount

460 x 350 x 150 mm (Height)

6 kg (Weight)

The Shanes Leg is a compact, robust dry bone holder designed for arthroplasty training applications. It features a single-lever ball joint locking system for quick, secure positioning and includes mounting clamps for stable attachment. Adjustable collateral ligament tension allows realistic joint simulation, with Varus, Valgus and Neutral models available to suit different training needs.
